John Dee mapped the 21 letters of the Enochian alphabet to 22 letters of the Elizabethan English (Latin) alphabet through a direct character-by-character substitution system received during his 1583 scrying sessions with Edward Kelley. Because 16th-century English orthography differed from modern English, Dee treated U and V as a single letter and omitted J, K, and W. How the Mapping Process WorkedScrying Transmission. Beginning on March 26, 1583, Edward Kelley gazed into a crystal "shewstone" and described each angelic character, its specific angelic name, and its English letter equivalent while John Dee recorded them in his diaries. Elizabethan Spelling Rules. In 1580s English, I and J were interchangeable, as were U and V, while K was largely covered by C (or Q) and W was written as a double U (VV). Dee assigned one Enochian symbol (Van) to represent both U and V, and left out J, K, and W completely. Diacritic Variation. One of the 21 Enochian letters could appear with or without a diacritic dot in Dee's manuscripts to distinguish specific phonetic or contextual uses. Primarily Transcribed in Latin Letters. Even though Dee documented the distinct, angular Enochian script (written from right to left), he recorded almost all of the received angelic texts, dictionaries, and Forty-Eight Angelic Keys using standard English letters. The Enochian script itself only appeared sporadically in his manuscripts for specific talismans and tables. John Dee's Letter-by-Letter Mapping TableEach Enochian character has its own name and maps directly to an Elizabethan English letter rather than following English alphabetical order: English LetterEnochian Letter NameNotes on Elizabethan MappingAUnMaps directly to ABPaMaps directly to BCVehAlso covers the hard K soundDGalMaps directly to DEGraphMaps directly to EFOrMaps directly to FGGedMaps directly to G (and J in later adaptations)HNaMaps directly to HIGonAlso used where modern English uses J or YLUrMaps directly to LMTalMaps directly to MNDruxMaps directly to NOMedMaps directly to OPMalsMaps directly to PQGerMaps directly to QRDonMaps directly to RSFamMaps directly to STGisgMaps directly to TU / VVanShared symbol for both U and V (and W as double Van)XPalMaps directly to XYGonShares the Gon character with IZCephMaps directly to ZLinguistic Clues in the MappingEnglish Digraphs. Beyond individual letters, Dee's Enochian texts rely on distinctly English two-

letter combinations—such as ch, ph, sh, and th—to represent sounds that do not have single-letter symbols in the Enochian alphabet. Historical Precedent. Historians note that the visual shapes of Dee's Enochian letters closely resemble an earlier "Enochian" script printed in Johannes Pantheus's 1530 alchemical book Voarchadumia Contra Alchimiam, a copy of which Dee owned and annotated in his personal library. If you'd like to explore further, I can share details on: How Johannes Pantheus's 1530 script compares visually to Dee's alphabetHow word-by-word translations worked during Dee and Kelley's scrying sessionsHow Golden Dawn magicians modified these letter names and pronunciations Shared0 filesWikipediaEnochian - WikipediaThere are 21 letters in the script; The alphabet also shares many graphical similarities to a script, also attributed to the proph...Theosophical Society in AmericaThe Tongue of Angels - Theosophical Society in AmericaEnochian—language features an independent 21-character alphabet, distinct grammar, and texts like Liber Loagaeth and Forty-Eight A...Futility ClosetEnochian - Futility ClosetAugust 21, 2016 — In 1581, using a “shewstone,” or crystal, astrologer John Dee and seer Edward Kelley set out to discover knowledge that couldn't b...dCodeEnochian Translator - Alphabet and LanguageThe Enochian alphabet has 21 or 22 letters, Each symbol has a name and an approximate phonetic value.
